

Specifications:

The Brothers Bait Bag is a 2x2 in. square nylon mesh bait holder and chum bag. It is made by cutting 4in. squares from rolls of "ultra thin" nylon mesh material called (Nylon Tull). The four inch squares are folded in half to make the square. The sides are sewn together with cotton thread matching the color of the material used to make the bag. Then a drawstring is sewn through the sides of the bag at the top portion (open-end) of the bag giving means for drawing the openend of the bag closed to secure a hook and bait inside the bag. The construction of the bag itself is complete with the exception of those bags which are treated with "Crab Scent" to enhance the olfactory attractiveness of the bag to certain classes of fish in fresh, brackish, and salt waters. Scented Bait Bags are made from the same bags mentioned in the above stated construction process. After the color coded drawstring for closing the top portion of the Bait Bag "closed" is in place, the bag is then dipped and soaked in crab oil and juices for a period of time to allow the scent of crab to adhere to the nylon mesh netting. The crab oil and juices are made by first: Steaming live male crabs to doneness. the meat of the crab is picked from the shell and left to soak in the water and juices produced by the act of steaming the crabs. The crab shells with legs and remains of the body are then mashed to almost paste. Bait Bags are then placed into this solution for several hours. After this period of time the bags are removed from the crab oil and juice solution and laid flat to dry naturally at cool temperature. After this process the crab scented Bait Bag is ready for use.

Origin & Use of the Brothers Bait Bag:

The Brothers Bait Bag was developed and tested by four brothers who regularly fish Maryland and Virginia beaches, piers and other waters along the Eastern Coastline using 11 - 15 foot surf rods and tackle to launch 5 and 6 oz. sinkers up to 200 yards to find the "Big Fish Honey Hole" for Maryland's Stripped Bass, Trout, Weakfish, and, Jumbo Croakers. These fish are all partial to Soft Crab, and, Razor Clams which are very soft and expensive baits to waste in the attempt to cast them to the special spot. Hence, the Brothers Bait Bag. Using a 1/0 to 6/0 circle hook or other Bait hook attached to a long leader, place Soft Crab or other designed bait onto the hook then slip the Brothers Bait Bag over the hook and bait then pull the drawstring portion of the bag snug to the shank of eye of the hook to secure the baits inside of the bag. Cast the hook with the leader bag attached short distances, long distances, or, bottom fish. The Crab Scented bag containing fresh Soft Crab, or, Peeler Crab will leave a Chum slick in the vicinity of your hook as the Crab Scented oils and juices are released from the mesh material. Helping to produce strikes by fish.
